Lawrence Albert Njobo

AI and software engineer | Agents, cloud and security

lawrencenjobo9@gmail.com lawrence-njobo.me linkedin.com/in/lawrence-njobo github.com/AlbertNjobo

SUMMARY

Computer Science graduate (BSc Hons, First Class, NUST) and winner of the Vice Chancellor's Prize, who builds AI tools people use and runs the cloud behind them. I built Procurely, a procure-to-pay agent with human approval checkpoints and a policy knowledge base, and I am building Brightpath, bilingual Shona and English learning games for children who learn differently. A year as ICT Intern at the Institute of Chartered Accountants of Zimbabwe taught me to turn manual processes into automated ones and to keep the systems behind them running. Certified in CompTIA Security+ and as a Google Cloud Associate Cloud Engineer.

EXPERIENCE

Marketing and Analytics Lead

JUL 2026 TO NOW

Baudacecheveux, part-time and remote

- Wrote a Python tool that pulls GA4 and Search Console data into one report through their APIs.
- Traced an 8x session gap between Shopify and GA4 on US desktop traffic to bots.
- Wrote reusable Shopify Sidekick skills and a prompt library for the team.

Operations Collaborator

JAN 2024 TO NOW

Manifold Research Group, remote

- Handle scheduling, events and workspace logistics for distributed research teams.
- Co-manage the design, development and hosting of the Manifold website with Git and GitHub.
- Maintain documentation templates and knowledge management across shared repositories.

ICT Intern

SEP 2024 TO AUG 2025

Institute of Chartered Accountants of Zimbabwe (ICAZ)

- Rebuilt a paper procurement process on Power Apps and Power Automate, cutting approval times by 60%.
- Deployed Freshdesk with SLA workflows and resolved 200+ incidents in its first three months.
- Administered Microsoft 365, Active Directory and Entra ID accounts and licences, and rolled out MFA through Conditional Access.
- Configured the iMIS membership and finance system for 500+ users.
- Wrote SQL to audit finance data during a migration, supporting a 15% budget reduction.
- Worked on a four-site LAN upgrade, configuring switches over SSH and Sophos firewall rules.
- Monitored Proxmox VE virtual machines and managed their replication backups.

Research Extern

JUL TO AUG 2024

Extern, hosted with National Research Group

- Researched emerging AI risk categories and turned eight technology failures into business impact case studies.

EDUCATION

BSc (Hons) Computer Science, First Class (Distinction)

2022 TO 2026

National University of Science and Technology (NUST)

- Vice Chancellor's Prize (2026).
- Final year project: BloodChain, a blockchain blood supply system, marked 81.
- Coursework: Artificial Intelligence, Software Engineering, Database Systems, Computer Networks, Operating Systems.

ZIMSEC Advanced and Ordinary Level

2016 TO 2021

St Faith's Secondary School

- Advanced Level: Computer Science, Physics and Pure Mathematics, all at grade A.
- Ordinary Level: 15 subjects, 13 at grade A.

PROJECTS

Procurely, AI procure-to-pay agent — 2026

Solo build. github.com/AlbertNjobo/procurely

- Built an agent that carries a plain-language purchase request through RFQs and bid analysis to a purchase order.
- Paused the agent for human approval at set checkpoints, and delegated work to specialist sub-agents.
- Enforced purchasing policy through retrieval over embedded policy documents.
- React, TypeScript and Express; deployed with Docker Compose on Alibaba Cloud behind Cloudflare.

Brightpath, learning games for children who learn differently — 2026, IN DEVELOPMENT

Design and build. brightpath-coral.vercel.app

- Bilingual Shona and English maths and reading games, with every question read aloud.
- Wrote Pathfinder, an adaptive engine that tracks mastery per skill, as plain, unit-tested logic.
- Offline first: games are cached on the phone and answers sync when the connection returns.
- Next.js, React and Supabase, packaged for Android.

BloodChain, blood supply management — 2026

NUST final year project

- Stored donor data in Supabase PostgreSQL under row level security, behind an Express API.
- Wrote an audit trail to Hedera Hashgraph, averaging 3.2 second confirmations.

Sentinel API, server health monitoring — 2025

github.com/AlbertNjobo/sentinel-api

- FastAPI service on SQLite that reports CPU, memory, disk and network metrics and raises alerts.
- Deployed on Ubuntu behind an Nginx reverse proxy, with ufw rules and Certbot TLS.

Also built

- Job Application Skill: an open source Claude Code plugin that tailors CVs, writes cover letters and tracks applications.
- Zimbabwe Grocery Market MCP: an MCP server in Python that compares prices across four retailers.
- LithiTrust: project lead of Task Force 404, a team of six, at the Lithium Value Chain Hackathon 2025.

CERTIFICATIONS

CompTIA Security+ (SY0-701)	SEP 2026, VALID TO SEP 2029
Microsoft Azure Fundamentals (AZ-900)	AUG 2026
Google Cloud Associate Cloud Engineer	JUL 2026, VALID TO JUL 2029
ISC2 Certified in Cybersecurity (CC)	JUN 2026
AWS Certified AI Practitioner	JUN 2026
Kubernetes and Cloud Native Associate (KCNA)	MAY 2026
Google Cloud Generative AI Leader	OCT 2025, VALID TO OCT 2028
GCI World, Data Science, The University of Tokyo	AUG 2026
Claude with the Anthropic API, Anthropic Education	COURSE

SKILLS

AI and agents	Claude and Claude Code, MCP servers, multi-agent delegation, human-in-the-loop approval, RAG, Vercel AI SDK
Languages and frameworks	Python, TypeScript, JavaScript, SQL, Bash, PowerShell, React, Next.js, Express, FastAPI
Cloud and infrastructure	Google Cloud, Azure, AWS, Docker, Kubernetes, Terraform, Linux, Nginx, Proxmox VE
Security and Microsoft	Microsoft 365, Entra ID, Active Directory, Conditional Access, Intune, Power Platform, Sophos firewall
Data	Supabase (PostgreSQL, row level security, pgvector), Microsoft SQL Server, SQLite, Firebase, GA4

LEADERSHIP

- Regional Leader, Microsoft Global Community Initiative 2026: one of 118 chosen from 300+ applicants.
- Regional Finalist, Huawei ICT Competition 2025 to 2026, Cloud Track.
